

## Zip File Download and use Instructions

On your computer create a folder for your downloads and call it whatever you choose. In that folder, create 4 folders and call them 1,2,3,4. There are 4 zip files to download.

Download each file into its own folder. I suggest you download each file individually, as they are large and will take 5 to 15 minutes to download, depending on your high speed capabilities. If you have dial up, you will most likely not be able to download the files. Once each file is downloaded, unzip them inside their own folder. Double click the icon that says **index.htm**. Then click the link for the dicom viewer. When the next screen pops up click run, then click run on the next screen. Once the viewer opens, click the camera icon in the left hand corner of the viewer. When the folder opens up, click the file that says **dicomdir**, then click open. You can now view the X-Rays.
